Increasing SAT Participation

By Nick Cote

Agenda

- 1. Problem Overview
- 2. Data Overview
- 3. Key Facts and Figures
- 4. Problem Analysis
- 5. Recommendations

Problem Overview

- How do we increase participation in the SAT amongst high school graduating classes from the lowest SAT participation states?
- How can we best allocate resources to facilitate the increase?

Data Overview

We analyzed the following data sets:

- 1. 2017 and 2018 SAT Data on a State-by-State basis
 - a. Data includes participation rates, Math section score, English & Reading section score, and total score
- 2. 2017 and 2018 ACT Data on a State-by-State basis
 - a. 2017 data includes participation rates, section scores (Math, Science, English, and Reading), and a composite score that is the average of the four sections
 - 2018 data does not include section scores and only includes participation rates and Composite score

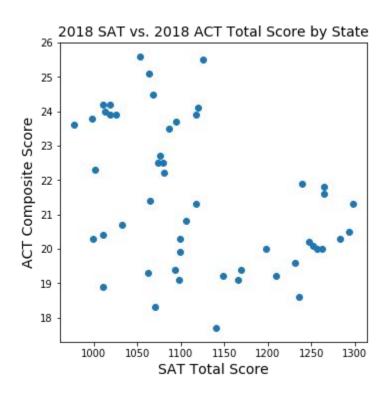

Key Facts & Figures

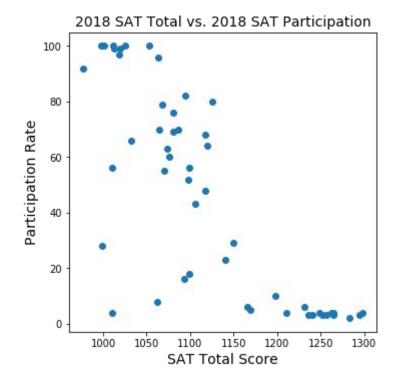

2018 SAT Total Mean	2018 SAT Total Median	2018 ACT Composite Mean	2018 ACT Composite Median	
1120	1098	21.5	21.3	

State	2018 SAT Participation	ACT Participation
North Dakota	2%	98%
Wyoming	3%	100%
South Dakota	3%	77%
Nebraska	3%	100%
Wisconsin	3%	100%

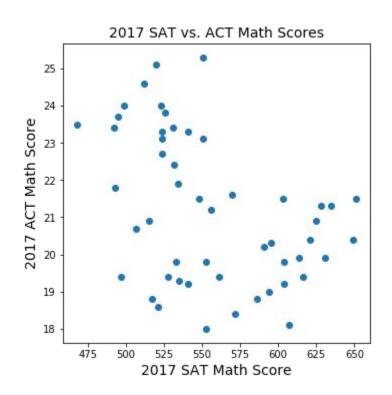

State	2018 SAT Total Score	2018 ACT Composite
North Dakota	1283	20.3
Wyoming	1257	20.0
South Dakota	1240	21.9
Nebraska	1252	20.1
Wisconsin	1294	20.5

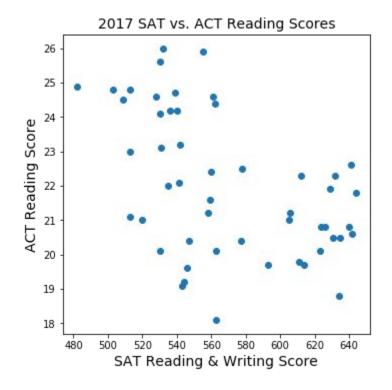

Key Facts & Figures (Continued)

Key Facts & Figures (Continued)

Problem Overview

- Our lowest participation states are actually scoring above the mean
- Negative correlation between score and participation
- Negative correlation between subject scores on the two tests

Key issue - in low participation states, does the fact that only certain types of people take the SAT dampen enthusiasm?

Recommendations and Areas for Further Research

- Access to tudors / other score improvement methods
- Network effects focus on specific schools
- Can we link income to score and participation?
 - Population density?
- Potential for survey data to link study time and score
